

# Waste No Water

There is a limited supply of water in our world. Yet, there are simple things we can all do to not waste that supply like turning off the water while we brush our teeth and taking shorter showers. Practice saving water in this game using recycled cans.

## What you will need:

- Tin cans that have been cleaned out
- Water
- Enough space to set up a start and finish line

## What to do:

- Fill a tin can up with water
- Decide on a start and finish point.
- Signal “go” and have the first person run to the finish line, turn around, go back.
- If there is more than one person playing, have them pass the tin can to the next person. Repeat until everyone has a turn.
- See how much water is left in the can

**Bonus challenge:** Have each player balance the tin can on their head or use a blindfold.
