

# Stacking Cups

Many of our regular groceries come in single use packaging, such as such a yogurt, milk and eggs. For some products finding a long term sustainable alternative, such as glass jars or cloth bags, isn't yet an option. As such think about how you can find additional uses for items again before putting them into recycling, perhaps yogurt pots for planting or bird feeders.

## What you will need:

- Ten cleaned yogurt pots
- Timer

## What to do:

### Option 1:

- Use your pots to stack a tower as high as possible.

### Option 2:

- Starting with a base of four yogurt pots, stack them up to build a pyramid.
- As you become more practiced at building with yogurt pots start to time yourself, perhaps try competing with others in your household.

**Bonus challenge:** As you collect more pots start building larger and larger pyramids.
